

#Description: Notes from live-audit session

GTDA

- write down goals.(ask questions from codebase.) RTFM
 - related to finding out how to do stuff. eg mint, burn etc.
 - how main functionality works depending on protocol.
 - what unique functionality is implemented.
 - how unique parameters are involved.
 - which currencies are used how they are handled.
- Scope out the protocol
 - roughly go over codebase to make a sense of the kind of protocol
 - note down main workings
 - how access control is managed between contracts
 -
- Note down potential issues
 - orderbook bad implementation -> dos, frontrunning
